

Sprint 1 retro document

Group 6

- A short description of what we did well

In the first sprint, we did a really good job by setting up our development environment and tool, for example, we created GitHub repo, discord for communication, and Visual Studio 2019 for coding. Also, we document our work and save the documents on GitHub so it will be accessible by all members of the group.

- A short description of what did not go well

In development teams mistakes are common. Thus, we tried to utilize the test-driven development, but it was hard to implement it and we don't think that we did a test-driven development, but we could try it for the next Sprint. also, we faced some technical issues in our meetings when we try to share our screens in discord. Finally, we didn't focus on the Zen hub board in the first week.

- what could have been done better in Sprint 1.

One of the things that could have been done better in sprint 1 is creating tests before the code for the test-driven development. Also, if we did spend more time on the project design it might help us to implement it easily. Moreover, If we focused on the general ideas more than the details it might help us do the work faster.
